Your supplier when quality is crucial

Our suppliers

Atlas

Atlas Material Testing Technology, LLC, is the global leader in Weathering Testing Services and Technology. They offer a wide range of instruments and systems for different products and materials durability testing against the effect of sunlight, temperature, climate variations and moisture in the form of rain, dew and humidity.

The product range include the internationally accepted Weather-Ometer®, Fade-Ometer®, Xenotest® and Suntest®.

Atlas also offers the world´s largest network of natural weathering facilities for outdoor testing of materials and products. The outdoor test sites are located worldwide to ensure factors from a variety of climates are considered.

khs Technical Lightning

Atlas/khs Technical Lighting is a global leader specialised in customized technical lighting systems for solar simulation and high-speed photography/video. The systems are applicable for automotive safety tests and other safety experimentals as well as material durability and lifetime prediction evaluations.

Erichsen

ERICHSEN GmbH have developed and manufactured instruments for material testing and quality control for over 100 years and is today the world leader in sheet metal testing. Erichsen also manufactures instruments for surface- and material testing such as Hardness, Adhesion, Impact resistance, Porosity, Density, Film application -instruments and much more.

Ascott

Ascott have been at the forefront of test chamber design for many years and are now specialized in manufacturing hi-tech salt spray and cyclic corrosion chambers for the creation of precisely controlled corrosive climates. Their current range of salt spray and cyclic corrosion test chambers are market leaders and in demand world-wide. The reputation of Ascott has been built upon supplying high quality products, incorporating innovative design concepts and backed-up by a comprehensive after sales-support service.

Zehntner

For more than 40 years the brand name Zehntner have been standing for high quality electronic, physical measuring and testing instruments. Today's business is focused on measuring and test equipment for the road sector and instruments to the paint industry. Their product range includes Adhesion, Application, Drying Test, Film Thickness, Gloss, Retroreflection, Road Marking and more.

HunterLab

HunterLab's overall objective is to provide the most effective instruments and services available for the identification, measurement and control of the way things look.

With over 55 years of experience, we are able to apply state-of-the-art technology to our systems to ensure their suitability for "real world applications". These systems are application driven and are geared to making the user's product measurement job simple, straightforward and successful.

HunterLab instruments are used in a wide variety of industries including building material, chemical, food, paint, paper, pharmaceutical, plastic, textile and many others.

KRÜSS

KRÜSS GmbH are specialists in interfacial chemistry and the world leading manufacturer and supplier in the field of surface tension and interfacial tension instruments. The product range contains Tensiometers, Foam/Bubble Analyzers and contact angle instruments; that are all built with very high quality and precision. KRÜSS also offers a combination of products and scientific advice in order to help their customers to optimize and make better use of their technologies.

VeriVide

VeriVide is a UK manufacturer of color assessment cabinets and systems for visual quality control. Their product DigiEye is a revolutionary none contact digital imaging system that captures and measures the total colour and appearance of 2D and 3D images in a unique controlled lighting environment. VeriVide also offers custom designed color assessment cabinets with special designed light sources and shapes as well as roof solutions to cover bigger areas.

SDL-Atlas

The SDL Atlas Group of companies offers the largest range of textile testing equipment, laboratory products, consumable items, and support services available from a single source.

Taber Industries

Taber Industries' Materials Test and Measurement Division is a global leader for the design and manufacture of high quality, affordable test instruments. Used to evaluate the physical properties of materials, Taber instruments play a critical role in the way companies test the durability of their products.

Bio-Logic

Bio-Logic SAS is a manufacturer of high performance, research laboratory instruments for electrochemistry, battery and fuel cell testing. The products are based on a modular and flexible design that offers potentiostat workstations from single channel units up to 16 channel systems, integrating EIS capability and high current boosters.
Bio-Logic also offers a wide range of accessories for electrochemistry such as Flat Cells, Flow Cells, Working Electrodes, Counter Electrodes, Cables, Spectrometers, Rotating Disk Electrodes and more.

aralab

The product range of climatic test chambers is fully user-oriented. aralab constantly look at the present and future needs of their customers all around the world. Customer projects are a determinant source of innovation and specialized knowledge for the company and continuous improvement and customer guidance are their main quality guidelines. The climate chambers are used in the fields of Plant and Biotech research, Stability/ Photostability tests and environmental tests in industry to name a few.

Argentox

Argentox plan, design, construct, supply and install ozone generators and complete ozone test cabinets to meet your needs. They provide their customers with specialist advice and solutions tailored to meet their particular requirements. Their ozone generators and test cabinet offer the perfect combination for a closed system for accelerated ozone tests.

CROMOCOL
Scandinavia

Cromocol Scandinavia AB

Cromocol Scandinavia AB is a company with main focus on test equipment and instruments for material testing. The company was founded in 1945 and is today one of the biggest suppliers of test equipment and laboratory machines and instruments in Scandinavia.

The products we market are from world leading manufacturers, renowned for its quality and technical innovation. Todays business if focused on instruments and test equipment for material testing and quality control to industries like Automotive, Paint and Laquer, Plastic, Textule, Steel and Sheet metal, Food and packaging, Testing and Research Institutes, Universities, Photovoltaic and Solar Panels to name a few.

Service & Calibration

We have great knowledge about our suppliers instruments and do offer service and calibration for most of our instruments.

We Offer

- Service agreements
- Annual service
- Calibration of instruments
- Installation and training
- Seminars and education
- Customised projects
