

Every lift **is unique**

At TRANSLYFT we combine 50 years of experience with innovation and insight into your needs. We are developers and consultants, as well as manufacturers. Meaning that we make solutions, not just tables.

Our business is lifting your business

It's not just about reliability, ergonomics, work environment and efficiency. It's about your **competitive power and the future readiness of your workflow.**

Every lift is unique. That's why we at TRANSLYFT customize our solutions to meet your specific requirements, and that's why we combine a strong core line of lifting solutions with two ground breaking new product lines, Hygienic Design and Silverline.

We have a **tried-and-tested business model**, where we manage all aspects of the process from consulting, design and

product development to production and service under one roof.

Furthermore we have a **strong supply chain** and an extensive network of customer focused dealers and agents who are able to advise on how to find – not only the right products but also – the right solutions.

If you need lifting solutions, always look up TRANSLYFT first. Because **our business is lifting your business.**

Built on insight

We are developers and consultants as well as manufacturers. We look into your needs to find the right solution.

Made for your demands

Our products can be customized and designed to fit your needs and work processes.

Based on innovation

We have expert knowledge about the industry, products and safety – and want to set the standard for the future.

Keeps you running

Both our standard and bespoke solutions are high quality products, and we have fast service solutions.

Made in Denmark

We've been building lifting solutions since 1964, and all our products are produced in Denmark and developed by Danish engineers.

Experts in safe lifting

All our tables are manufactured according to the EN 1570 safety standard, and we are experts in safe lifting.

Where do you **need to lift?**

Reception & Despatch

It goes without saying that **mechanical lifting** and **compensation of level differences** are often needed in case of both reception and despatch.

Production & Assembly

In production and assembly it is important to balance **difference in levels, integrate work stations, optimize workflow** and ensure the right ergonomic position for the employees.

Loading Bay

For smaller level differences, e.g. between the vehicle and the permanent loading ramp.

Work Platform

For lifting people, tools and materials. Get access to difficult places and improve working conditions.

Low Profile

Ideal for manual handling. Has a low closed height so no pit is required.

Single Scissor

For the simple tasks that matter, like bringing goods to the most ideal height for the employee.

Pallet Lifter

For optimization of workflows with a design that provides great accessibility.

Double Horizontal

For lifting long items and doing heavy duty lifting. It's simple but effective.

Packaging

When you package your goods, it is very important that the **room is optimally utilized**, that it is **easy to manoeuvre** with materials and that the work stations secure **ergonomically correct lifts**.

Low Profile

Ideal for manual handling. Has a low closed height so no pit is required.

Pallet Lifter

For optimization of workflows with a design that provides great accessibility.

Lifting table with roller conveyor

Perfect for packaging lines to improve production flow.

Storage

In a warehouse or storage room it is crucial that you can easily **reach materials on more levels** and thereby **utilize the storage room** most efficiently.

Goods Lift

For the high lift situations with lifts between different levels and mezzanines.

Double Vertical Scissor

For use as a lifting table between different floors – with a lifting height of 4,500 mm

Mastlift

For moving goods between fixed levels in buildings this is a robust and safe solution.

Different materials for different needs

Stainless steel

An extremely durable and hygienic solution

Our stainless steel products are incredibly popular because they are durable, corrosion-free and easy to clean. They are therefore particularly suitable for environments, where hygiene is essential.

A stainless steel lifting table is a bigger investment than the standard, but because they are extremely durable the total cost of ownership will easily be worth it. We offer stainless steel lifting tables in AISI 304 or 316.

Galvanized steel

Suitable for harsh environments

Galvanized steel is steel coated with a protective layer of zinc. And even though the surface is scratched, the steel does not rust. Therefore, we always suggest a galvanized solution for lifting tables mounted outside.

A special feature for the galvanized table is the closed hydraulic system that keeps moisture out of the system, which makes the solution more durable and suitable for harsh environments.

Painted

To match your colours

Most of our lifting tables are delivered with a painted surface. The lifting table is made of steel and then painted in either our standard color (steel blue RAL 5011) or any colours from the RAL scale.

**Explosion
proof**

TRANSLYFT meets the requirements of the ATEX directives, and we are **certified to develop and construct explosion proof lifting tables** and lifting equipment.

Consequently, we can meet the requirements for explosion proof equipment within the various security zones and offer both standard products and bespoke lifting tables, goods lifts, work tables etc. in correspondence with ATEX.

Furthermore we use our expertise as advisors and guides on the topics.

We have delivered ATEX lifting tables for e.g. the offshore industry, the food industry and the pharmaceutical industry.

New product line in 2019

Hygienic Design

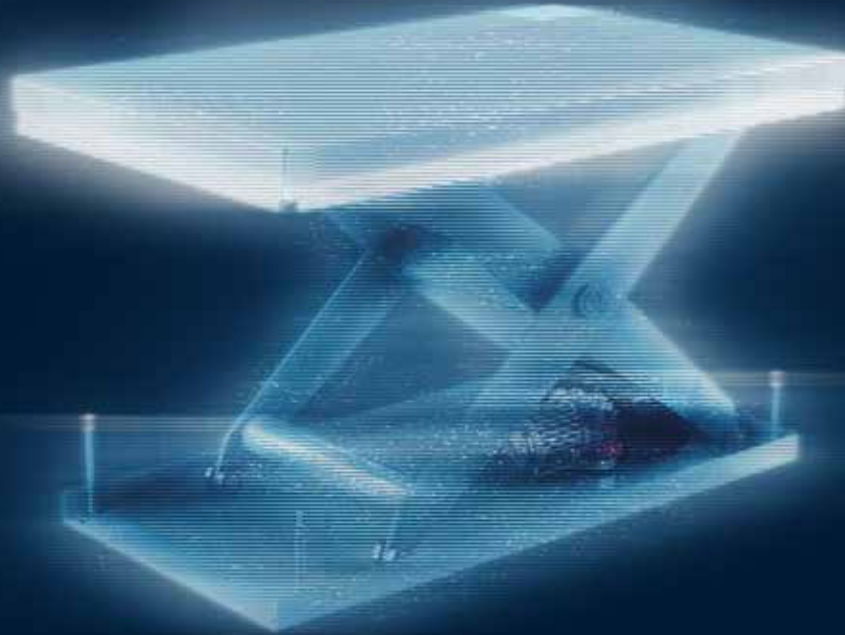

Save costs and reduce risks

The new TRANSLYFT hygienic design series is a state-of-the-art stainless steel product line.

They are all built with certified components and multiple structural optimizations in order to improve cleanability – and our bespoke models can be tailor-made to your demands.

Tests from the Technical University of Denmark document that the Hygienic Design tables offer a significantly better hygiene level and up to 50% savings in terms of cleaning time and cost compared to an ordinary lifting table.

There is no safe alternative to hygienic design.

New product line in 2019

Silverline

Ready for today. Prepared for tomorrow

Our new Silverline series sets a new standard for non-bespoke lifting tables.

The tables are made for the demands of today. The uptime of your production line is maximised through excellent craftsmanship and use of high-quality components. Furthermore, we offer day-to-day delivery and a fast Silverline service concept.

Our tables are made for the unknown demands of the future as well. The Silverline table is an open platform for innovation, and we are committed to using, exploring and expanding this platform. We want to set a new standard for today's industry standard.

Silverline: Because the choices of today matter tomorrow.

Spare parts and service

Our solutions are built with **high quality components** and **excellent craftsmanship**, but nothing lasts forever and mishaps do happen. We want to keep our customers lifting solutions running, and that's why we offer both spare parts and a flexible service concept.

Spare parts

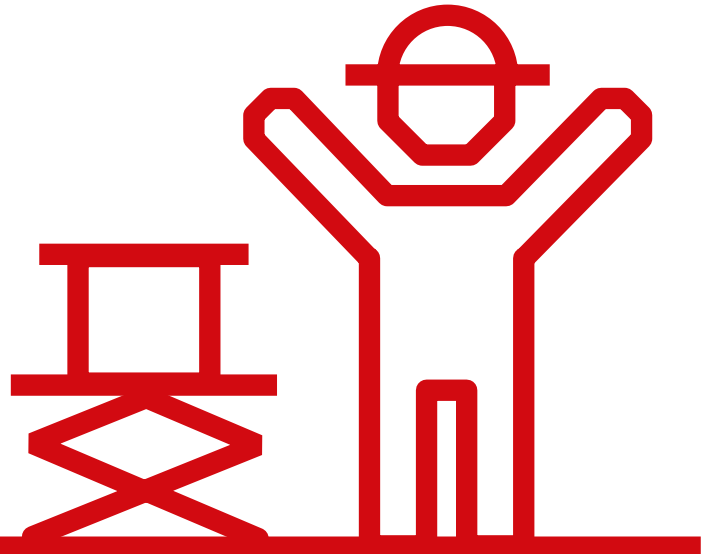

We manufacture all of our lifting tables and solutions ourselves.

Therefore, we always have original spare parts in stock and we're able to send them with day-to-day delivery.

Service provided

Depending on where you live in the world there are different possibilities for service for your lifting table.

In Denmark and England we offer special service packages including breakdown response. In the rest of the world please contact your local TRANSLYFT dealer and let them tell you more about your possibilities.

"I just can't fault them. They make good quality products and have never let me down. **My other suppliers could learn a thing or two from them.**"

- Quote from our Customer Survey 2018

We've sold and made lifting solutions **for companies all over the world**, including:

The LEGO logo, featuring the word "LEGO" in a bold, black, sans-serif font with a white outline and a slight shadow effect.The Unilever logo, consisting of a large, stylized letter "U" filled with a complex, intricate pattern of small, repeating shapes, with the word "Unilever" in a simple, lowercase sans-serif font below it.The ASDA Walmart logo, featuring the word "ASDA" in a bold, black, sans-serif font with a starburst symbol above it, and the word "Walmart" in a similar font below it with a starburst symbol to the right.The Carlsberg logo, featuring the word "Carlsberg" in a stylized, black, serif font with a small crown symbol above the letter "g".The thyssenkrupp logo, featuring a stylized, black, geometric symbol consisting of three interlocking circles, with the word "thyssenkrupp" in a lowercase, sans-serif font below it.The Coca-Cola logo, featuring the word "Coca-Cola" in its iconic, black, cursive script font.The TESLA logo, featuring a stylized, black, geometric symbol resembling a "T" with a curved top, and the word "TESLA" in a bold, black, sans-serif font below it.The TRIUMPH logo, featuring the word "TRIUMPH" in a bold, black, sans-serif font with a curved underline beneath the letters.

TRANSLYFT was established in 1964 and is Denmark's largest developer and manufacturer of hydraulic lifting tables. At TRANSLYFT we know that every lift is unique, and we work closely together with our customers – from insight to finished solution.
