

## **Quality products made from experience, flexibility and competence.**

RSG connexion was founded in 1984 and we are ideally situated in Karlskoga, central southern Sweden, where our main offices house both sales and the production facility.

### **Quality**

RSG connexion is certified according to ISO 9001:2008 and we follow a management process which leads us to continuously strive for constant improvement.

### **Flexibility**

Our competence together with our customer's ideas allows us to reach the best solutions and products for every unique project. At the same time we have the capability for serial production of various customer designed harnesses.

### **Competence**

With more than 25 years of technical experience of harness manufacturing, we offer the complete solution from qualified guidance to design, prototyping and production.

### **Harness assembly**

With the customer's requirements in focus, coupled with our technical knowledge and overall capability, we are able to offer everything from standard cable products to the more advanced, sealed and ruggedized harness systems, suitable for military use in extreme environments.

### **Distribution and sales**

Due to excellent collaboration with a number of world leading suppliers, we can offer a wide selection of harness assemblies and components. We carry a sizeable inventory and with many products in stock, we are renowned for our short lead times and flexibility.

### **Connector assembly**

RSG connexion is, as the only company in Scandinavia, approved for connector assembly according to the VG95234 standard. These connectors are assembled with parts from Amphenol. We have competitive pricing and short lead times for smaller quantities since the connectors are assembled in house. Since the beginning of 2010 we are QPL qualified to assemble D38999 series III connectors in collaboration with Deutsch.
