## General notes

This GIS documentation contains information about the lay-out and planning of suspended cranes and monorails up to 1600 kg.

1. The documents allow you a fast and efficient dimensioning of the crane equipments.

Technical notes:

- The documents for planning are based on the rules of the actual technique.
- Only GIS originally manufactured parts shall be used.
- The customer is responsible for the stability of the supporting structure.
- Painting: The crane equipment is delivered with a grey primer (RAL 7004).  
Upon request: A last coating of paint to your choice or a galvanisation is possible.

2. The components are specified with their appropriate technical datas, dimensions and order numbers.

3. An example of a project shows how to get straight to the solution and where the individual elements of the documentation can be traced.

4. The last sheet "Planning a GIS crane system" makes it easier for you to collect the information for the monorail or the suspended crane.

## Modifications

Modifications of the documentation will be advised. The relevant sheet will be exchanged and the number with the 9 figures completed by a letter.

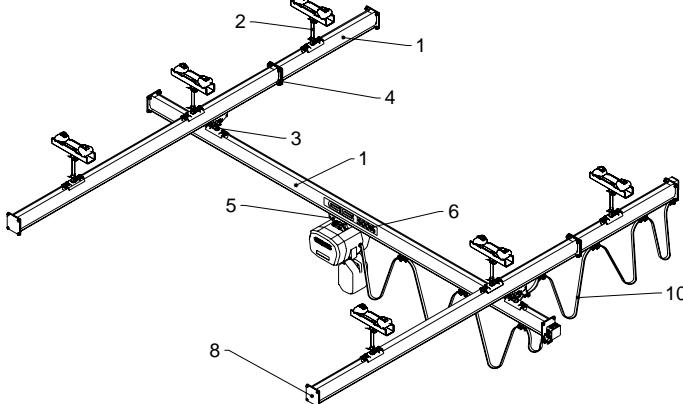

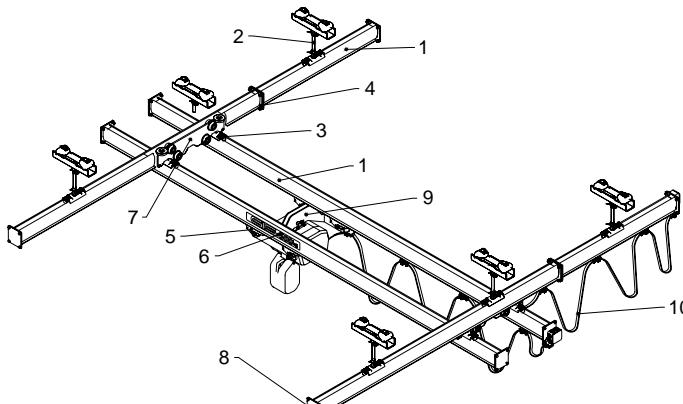

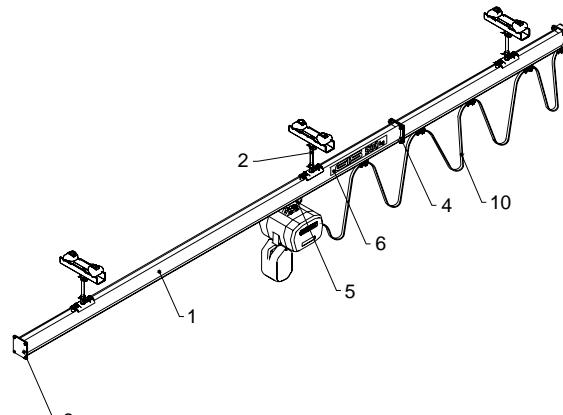

## Completions

These are made by a complementary sheet, the page number of which will be completed by a letter.

## Signs and symbols

	Crane bridge		Saddle
	Crane bridge reinforced		Flange width [mm]
	Profile		Load capacity [kg]
	Trolley		Dead weight [kg]
	Traverse		Electric mains for current supply
	Rolling apparatus		Ordering number

## Guide notes for the suspension points of GISKB crane systems

The distances between the suspension points depend on the profile size and the strain. This dimensioning is made according to the dia-grams or the calculation programme.

The type of suspension depends on the constructional situation. The short suspension can be of rigid or pendulating type. The suspensions from rod are available pendulating only. The pendulating suspensions allow a more simplified assembly, in so far as any alignment mistakes, as a result of inexact ceilings, can be avoided. Care is to be taken that the angle of the suspension does not differ more than 5° from the vertical position.

### 1. Monorails suspended from rods

Monorails suspended from rods must not be braced imperatively provided that no side dragging of hoist is made. Practice, however, shows that a side dragging cannot be excluded, wherefore a bracing is recommended. For rod suspensions of less than 0.5 m no bracing is required. If the monorail is suspended from rods by 0.5 m or more it is to be braced longitudinally and laterally. Longitudinal bracing is to be provided for both track ends and lateral bracing for every second suspension.

Monorails with bends and switches: We refer to the special guide notes for "Bends and switches".

### 2. Suspended cranes suspended from rods

If the suspended crane is suspended from rods by 0.5 m or more the two crane tracks must be braced longitudinally and one crane track must be braced laterally. Longitudinal bracing is to be provided for both track ends and lateral bracing for every second suspension.

### 3. Dimensioning suspended crane

#### 3.1 Crane bridge

The selection of the profile size depends on the strength (P) and the span (W) of the profile. In tables 3-1 (single crane bridge) and 3-2 (double crane bridge) can be read off the adequate profile size.

Strength ...: The strength (P) does include the dead weight of the electric chain hoist and the trolley.

The max. admissible load is as follows: for GISKB I = 800 kg / GISKB II = 1600 kg.

Span .....: The admissible span is shown in the table, depending on the type of profile.

Its maximum is 7800 mm.

The calculations in tables 3-1 and 3-2 are based on an admissible deflexion of W / 400 and a max. stress of 180 N/mm<sup>2</sup>. The load factor  $\psi$  and dead weight factor  $\varphi$  according to DIN 15018 have been included. For other deflexion factors there is a calculation programme at your disposal.

Admissible load overhang (y): A load overhang for crane bridges is admissible only by considering the calculation program.

 without reinforcement       with reinforcement

1250 kg	2.1	4.6	6.4	7.4	3.9	6.5	7.8	7.8

### 3.2 Crane track

The support center A is calculated according to the selection diagrams 3-3 (end field) and 3-4 (middle field). In the middle field is resulting a bigger support center than in the end field for one and the same load. The strain  $P_{KB}$  on the crane track is composed of the lifting load, the dead weight of the electric chain hoist and half of the crane bridge.

$$P_{KB} = P_H + P_1 + 0.5 \times P_{KT}$$

$P_{KB}$  = Strain crane track [kg]

$P_H$  = Admissible lifting capacity [kg]

$P_1$  = Dead weight trolley and electric chain hoist [kg]

$P_{KT}$  = Dead weight crane bridge [kg]

Admissible distance of joints (x) : The junction of two section tracks shall be at a distance of max.  $0.2 \times A$  and a minimum of 100 mm from the nearest suspension point.

Admissible load overhang (y) ... : No load overhang is generally provided for crane tracks.

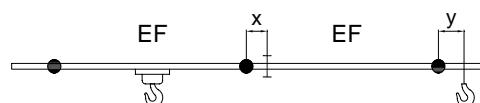

Diagram 3-3 End field (EF)

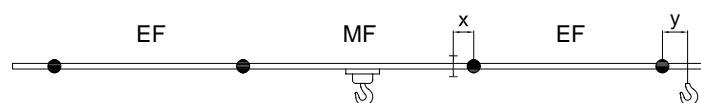

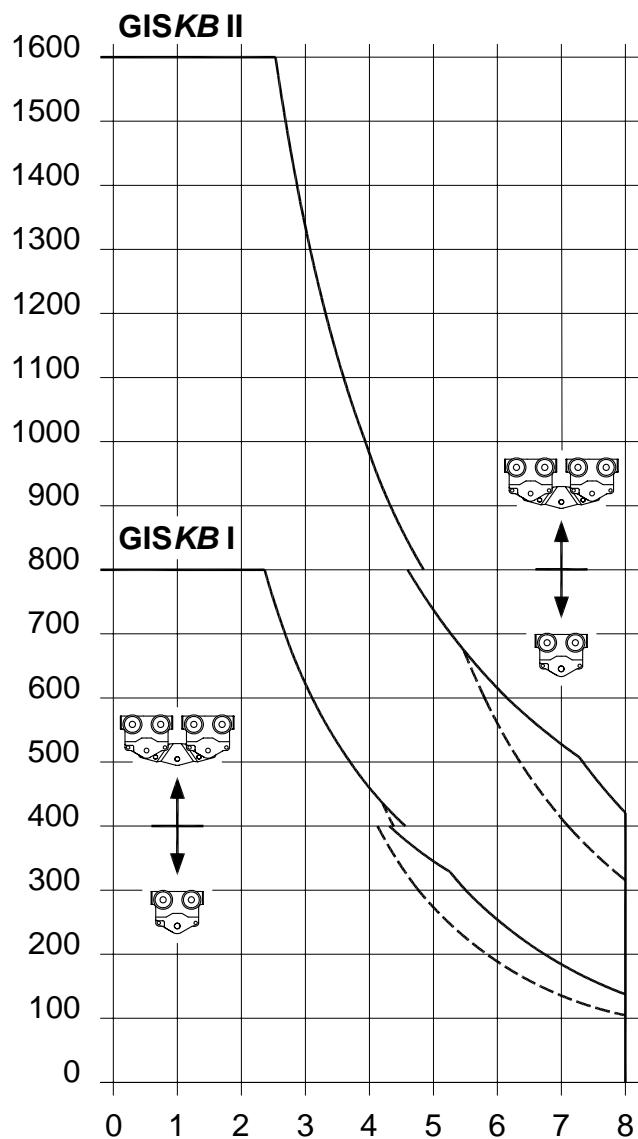

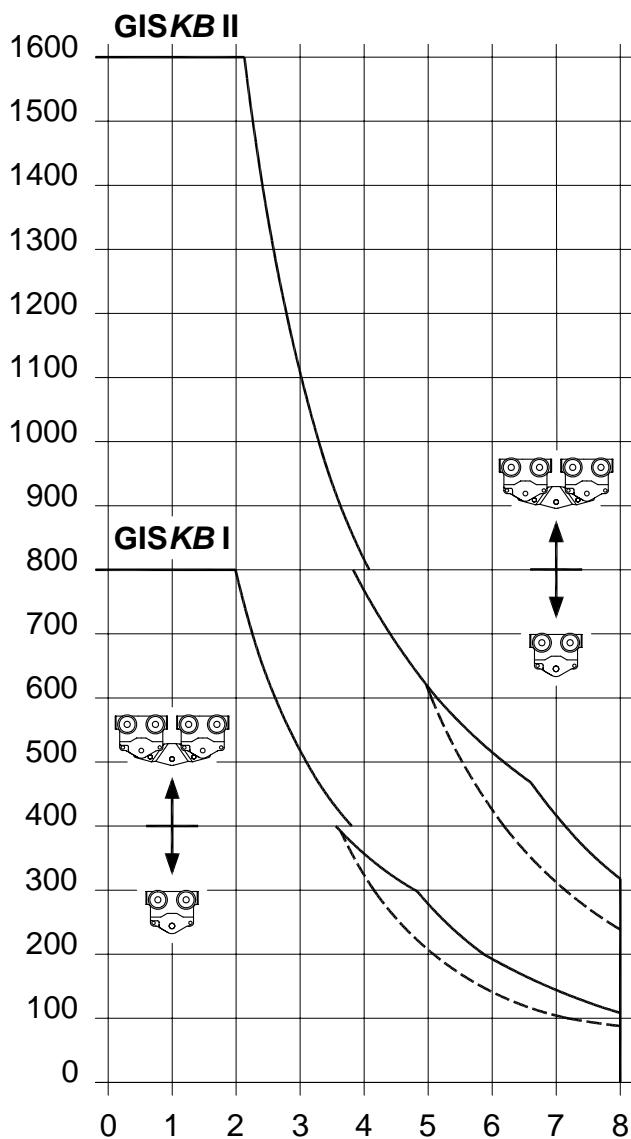

Diagram 3-4 Middle field (MF)

#### 4. Dimensioning monorail

The support center A is calculated according to the selection diagrams 4-1 (end field) and 4-2 (middle field). In the middle field is resulting a bigger support center than in the end field for one and the same load. The strain  $P_{HB}$  on the monorail is composed of the lifting load and the dead weight of the electric chain hoist.

$$P_{HB} = P_H + P_1$$

$P_{HB}$  = Strain monorail [kg]

$P_H$  = Admissible lifting capacity [kg]

$P_1$  = Dead weight trolley and electric chain hoist [kg]

Admissible distance of joints (x) : The junction of two section tracks shall be at a distance of max.  $0.2 \times A$  and a minimum of 100 mm from the nearest suspension point.

Admissible load overhang (y) ... : No load overhang is generally provided for monorails.

## Example of a project

Single bridge suspended crane: Load capacity: 500 kg  
 Load overhang  $y_1$  and  $y_2$  as big as possible  
 Crane bridge length L: 6000 mm  
 Longitudinal run: approx. 15000 mm  
 Crane track length B: according to outcome  
 Free choice for suspension points, direct on to steel structure, pendulating  
 Crane drive (longitudinal) and trolley drive (cross) manual  
 Power supply: Trailing cable

## Dimensions

<b>Single crane bridge</b>	Load capacity 500 kg, W = 5125 mm; see table 3-1, page 7	selected GISKB II, profile reinforcement IPE 120
Load overhang	see page 7; GISKB II with reinforcement; $y_1 = y_2 =$	selected 100 mm
Crane bridge length	$L = W + M_1 + M_2 = 5125 \text{ mm} + 225 \text{ mm} + 650 \text{ mm} =$	6000 mm
<b>Crane track</b>	see page 8	selected GISKB I
Strain	$P_{KB} = P_H + P_1 + 0.5 \cdot P_{KT} = 500 \text{ kg} + 28 \text{ kg} + 0.5 \cdot 162 \text{ kg} = 609 \text{ kg}$ $P_H = \text{admissible lifting capacity} = 500 \text{ kg}$ $P_1 = \text{Dead weight trolley + electric chain hoist} = 3 \text{ kg} + 25 \text{ kg} = 28 \text{ kg}$ $P_{KT} = \text{Dead weight crane bridge + reinforcem. + trolley longit.} = 6 \cdot 15 \text{ kg} + 4.725 \cdot 11.1 \text{ kg} + 2 \cdot 9.4 \text{ kg} = 162 \text{ kg}$	
Support centres $A_{EF}$	end field; see diagram 3-3, page 8; GISKB I	2600 mm
Support centres $A_{MF}$	middle field; see diagram 3-4, page 8; GISKB I	3100 mm
Load overhang	see page 8; GISKB I; $y_3 = y_4 =$	selected 0 mm
Crane track length	$B = 2 \cdot A_{EF} + 4 \cdot A_{MF} + M_3 + M_4 = 2 \cdot 2500 \text{ mm} + 4 \cdot 2700 \text{ mm} + 100 \text{ mm} + 100 \text{ mm} =$	16000 mm

## Number of cable carriages

$x_1$ Crane bridge	(6000 mm : 1250 mm) - 1 = 3.8	selected 4 pieces
$x_2$ Crane track	(16000 mm : 1250 mm) - 1 = 11.8	selected 12 pieces

## Dimension $a_1 - a_4$

$a_1$ acc. to table page 10	GISKB II	125 mm
$a_2$ acc. to table page 10	$a_1 + 25 + (x_1 \cdot D) = 125 \text{ mm} + 25 \text{ mm} + (4 \cdot 50 \text{ mm}) =$	350 mm
$a_3$ acc. to table page 10	GISKB I	230 mm
$a_4$ acc. to table page 10	$a_3 + 25 + (x_2 \cdot D) = 230 \text{ mm} + 25 \text{ mm} + (12 \cdot 50 \text{ mm}) =$	855 mm

## Load overhang $y_1 - y_4$

$y_1 = y_2$	GISKB II with reinforcement	selected 100 mm
$y_3 = y_4$	GISKB I	selected 0 mm

## Profile overhang $M_1 - M_4$

$M_1$ acc. to table page 10	$a_1 + y_1 = 125 \text{ mm} + 100 \text{ mm}$	225 mm
$M_2$ acc. to table page 10	$a_2 + y_2 = 550 \text{ mm} + 100 \text{ mm}$	650 mm
$M_3$ acc. to table page 10	$a_3 + y_3 = 230 \text{ mm} + 0 \text{ mm}$	selected 100 mm
$M_4$ acc. to table page 10	$a_4 + y_4 = 1455 \text{ mm} + 0 \text{ mm}$	selected 100 mm

## Position of traction limit

$d_1$ acc. to table page 10	$40 + (x_1 \cdot D) = 40 \text{ mm} + (4 \cdot 50 \text{ mm}) =$	240 mm
$d_2$ acc. to table page 10	$40 + (x_2 \cdot D) = 40 \text{ mm} + (12 \cdot 50 \text{ mm}) =$	640 mm

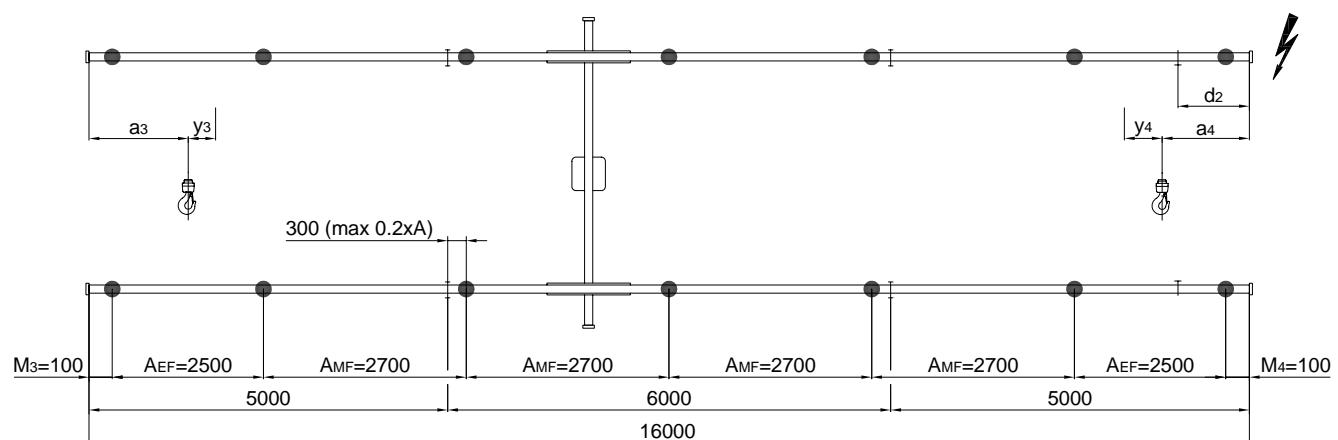

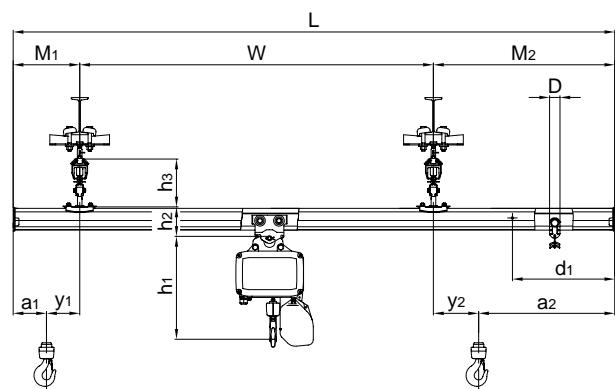

## Height measures

$h_1$ acc. to data sheet	electric chain hoist GCH 500/2 NF	417 mm
$h_2$ acc. to table page 10	GISKB II	181 mm
$h_3$ acc. to table page 10	GISKB I	260 mm

## Technical data

Single crane bridge: Profile GISKB II with profile reinforcement IPE 120  
 Load capacity: 500 kg  
 Span: 5125 mm  
 Crane bridge length: 6000 mm  
 Power supply: Trailing cable

Crane track .....: Profile GISKB I  
 Crane track length: 16000 mm  
 Distance end field: 2500 mm  
 Distance middle field: 2700 mm  
 Power supply: Trailing cable

**Cover**

Execution ....: Steel, galvanised.

The cover is used for the covering end of the track section and includes also a buffer.

	[kg]	a [mm]	b [mm]		N°
GISKB I	0.400	25	40		9305.1002.4
GISKB II	0.700	25	40		9306.1002.4

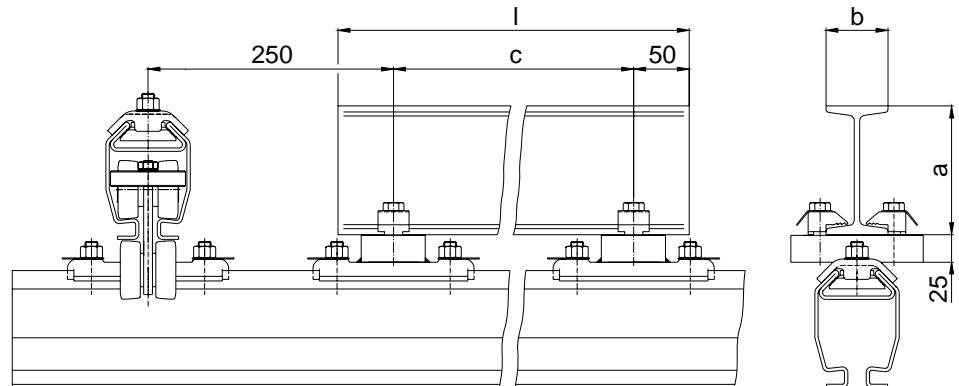

**Profile junction**

Execution ....: Steel, galvanised.

The junction of two section tracks is made by four high-tensile hexagon screws.

	[kg]	a [mm]	b		N°
GISKB I	0.100	25	M8		9305.1003.4
GISKB II	0.200	35	M12		9306.1003.4

## Profile reinforcement

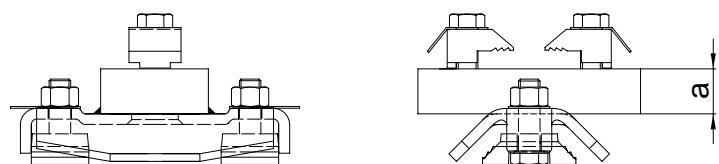

Execution ....: The three varying profile reinforcements can be used for GISKB I + II. The reinforcement is of grey primer and is clamped on the track section. No need of any welding.

Paint.....: RAL 7004 grey.

Note .....: Use the clamping holder complete (see page 16) for the necessary clamping. The length of the crane bridge reinforcement is span W - 400 mm.

	IPE 120	IPE 160	IPE 180

Reinforcements not available from stock.

**Clamping holder complete**

Execution ....: Steel, galvanised.

Use .....: Junction of profile and reinforcement.

	[kg]	a [mm]		N°
GISKB I + II	2.000	25		9309.3031.4

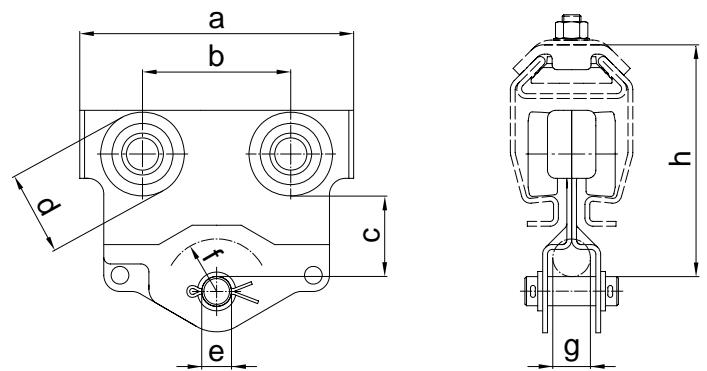

**Crane bridge suspension**

Execution ....: Steel, galvanised.

Use .....: For pendulating suspension of the crane bridge.

Note .....: The pendulating suspension of the crane bridge is possible only in connection with a crane track of pendulating type.

	[kg]	[kg]	a [mm]		N°
GISKB I + II	1.150	1600	85		9309.3068.4

**Trolley**

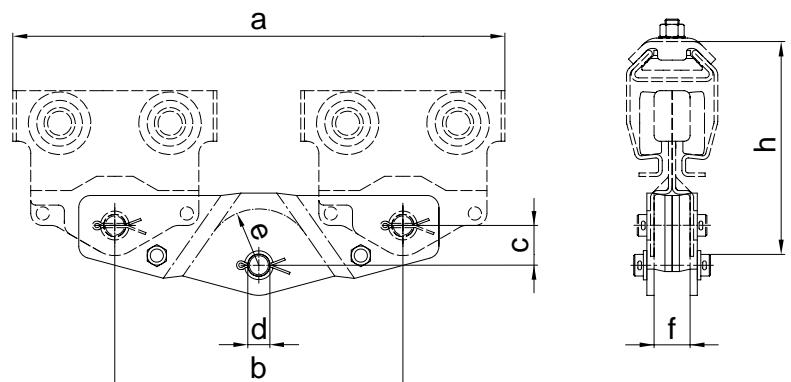

Execution ....: Steel, galvanised.

The trolley is made of steel and equipped with plastic guide rollers.

Use .....: The trolley moves the electric chain hoist. For the pendulating construction it can also be used as a longitudinal trolley for the crane bridge.

	[kg]	[kg]	a [mm]	b [mm]	c [mm]	d [mm]	e [mm]	f [mm]	g [mm]	h [mm]	N°
GISKB I	1.500	400	170	92	50	52	18	-	30	143	9305.1020.3
GISKB II	2.000	800	192	92	62	74	18	-	30	181	9306.1020.3

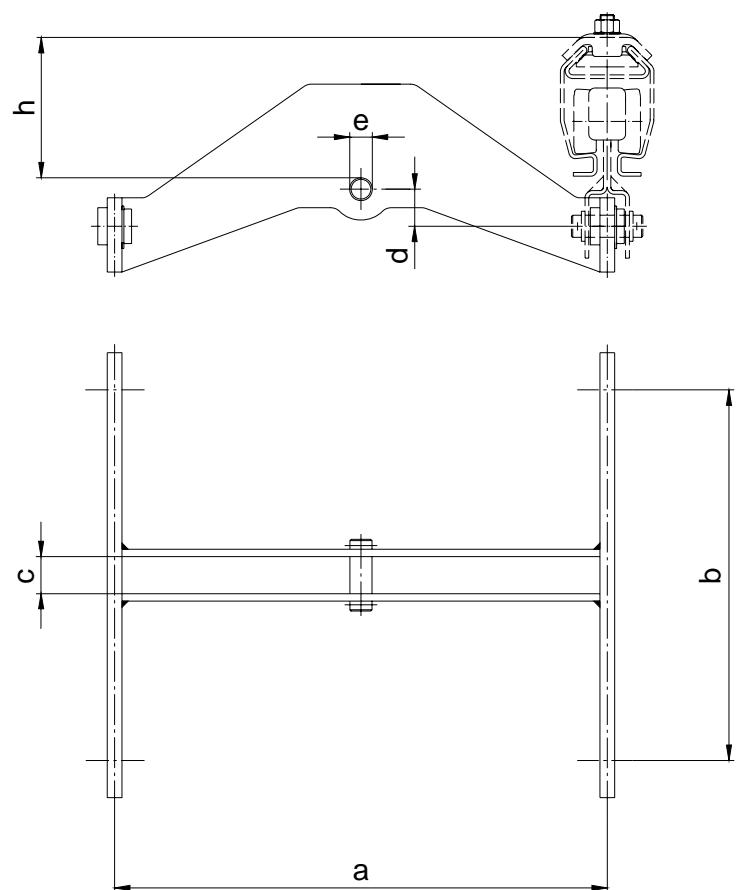

A traverse is coupled with two trolleys so as to favour the load partition. The saddle of the double crane bridge (see page 18) requires four trolleys.

**Traverse**

Execution ....: Steel, galvanised.

Use .....: The traverse allows a coupling of two trolleys.

	[kg]	[kg]	a [mm]	b [mm]	c [mm]	d [mm]	e [mm]	f [mm]	h [mm]	N°
GISKB I	2.000	800	410	240	33	18	-	30	175	9309.3020.3
GISKB II	2.000	1600	432	240	33	18	-	30	214	9309.3020.3

**Saddle**

Execution ....: Steel, galvanised.

Use .....: The saddle allows the junction of four trolleys for the double crane bridge version.

	[kg]	[kg]	a [mm]	b [mm]	c [mm]	d [mm]	e [mm]	h [mm]	N°

GISKB II	7.100	1600	400	300	30	30	18	151	9309.3021.3

**Rolling apparatus****EQB****DQB**

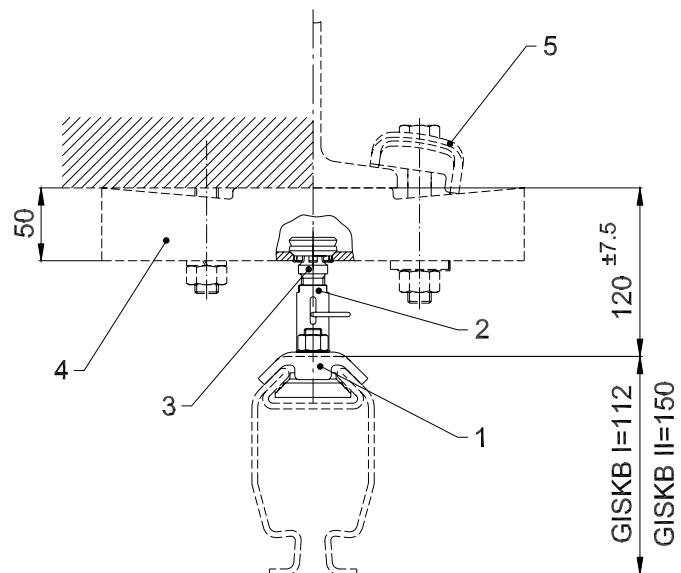

Execution ....: Steel, galvanised.

The rolling apparatus is equipped with plastic rollers. Lateral guide rollers and back pressure rollers prevent from tilting up or over within the profile.

Use .....: The EQB version is used for single crane bridges and the DQB version for double crane bridges; in each case the crane bridge is mounted fix. The assembly of the crane track can be of pendulating or rigid type.

			a [mm]	b [mm]	c [mm]	d [mm]	h [mm]	N°

## Suspension pendulating short adjustable

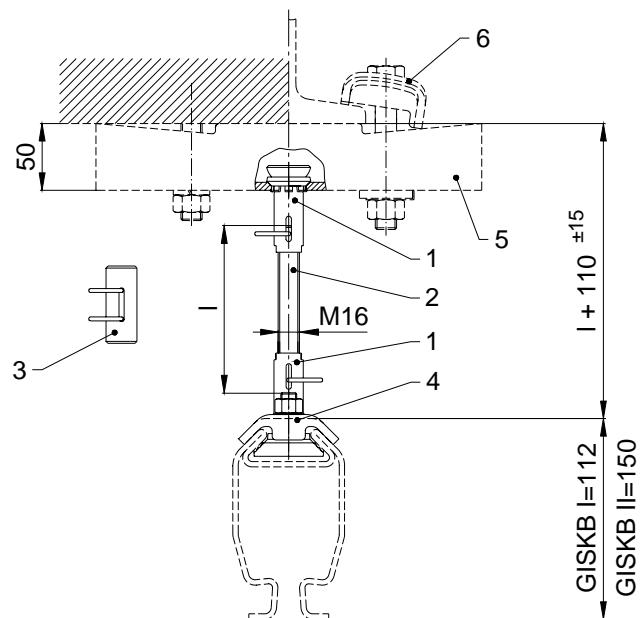

Execution ....: Steel, galvanised.

The shortest possible pendulating suspension is given by the ball pin and ball nut directly screwed-on. Pendulating movements of max. 10° are permissible. The suspension can be adjusted by ± 7.5 mm.

Note .....: Please consider the guide notes for suspensions (see page 6).

	[kg]	[kg]		N°

## Suspension pendulating from rod adjustable

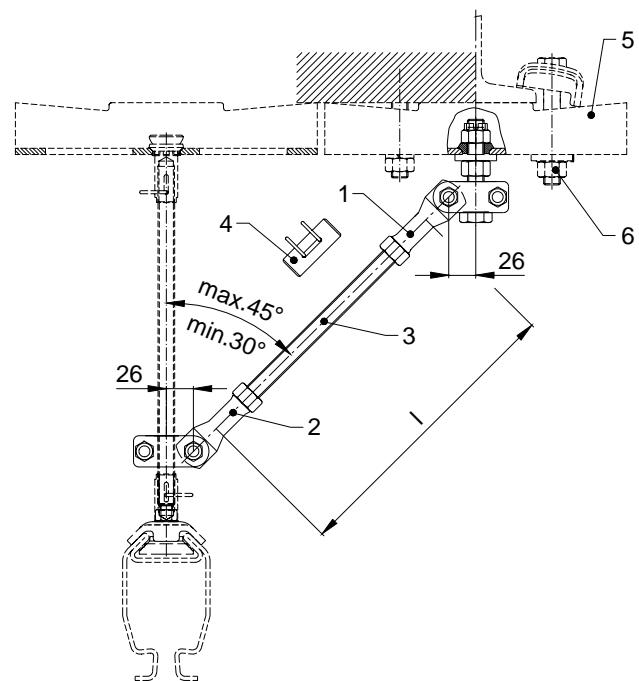

Execution ....: Steel, galvanised.

The screwed rod (2) with its varying length and the two ball nuts (1), duly screwed-on, form the suspension from rod. The suspension allows height level adjustments of  $\pm 15$  mm. The coupling (3) serves for the junction of two screwed rods.

Note .....: Please consider the guide notes for suspensions (see page 6).

## Electric tug

Execution ....: Friction wheel drive.

Trolley galvanised and equipped with plastic rollers, change gear box and motor in black finish.  
Controlled in series with frequency changer (FU) and equipped with brake.

Use .....: Electric drive for cross and long travel in GISKB I + II profiles.

Note .....: Suspension distance of the profile has to be determined according to load diagramme with electric  
tug (dotted line).  
Connector clamp to trolley and rolling apparatus have to be ordered separately.

**Bend**

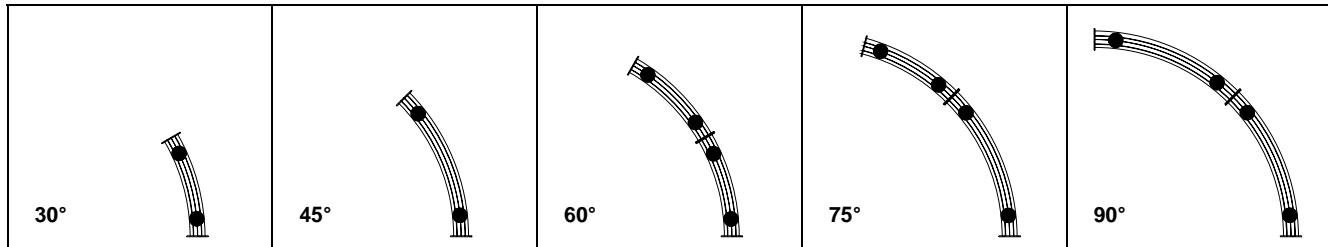

**Execution.....:** The bends are available with 30° and 45° angles. The radius is generally 1000 mm. At their ends is welded one each of an end plate.

**Paint.....:** RAL 7004 grey.

**Note .....**: By putting together several segments of bend one can obtain various angles (see sketch).

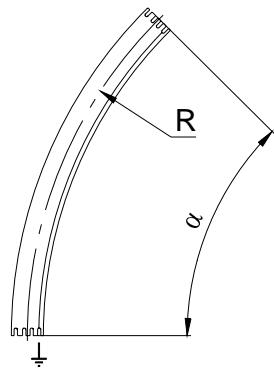

**Guide notes for the suspension points**

The suspension of the bends can be of pendulating short type, pendulating rod and rigid type. Bends of pendulating rod suspension type must be braced longitudinally and laterally, whilst the lateral bracing must show towards the interior side of the bend. The segment of the bend must be suspended twice (see sketch).

## Conductor line VA34, 4-poles, bend

Execution ....: The bends of the conductor lines are available with the same angles as the bends of the GISKB profile. The possible executions are: radius 900 mm (inside mounting) and radius 1100 mm (outside mounting). In addition the position of the earth wire must be defined.

### Guide notes for the suspension points

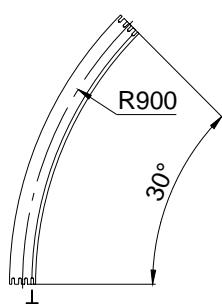

Each bend must be suspended twice as a minimum.

**Track switch**

TRACK SWITCH LEFT

TRACK SWITCH RIGHT

**Execution ....:** The track switch is of sliding type. The movement of the profiles is made manually or by an electric drive (operation see page 38).

**Paint.....:** RAL 7004 grey.

**Note .....**: For the provision of a conductor line your order must contain further details (see page 39).

**Guide notes for the suspension points**

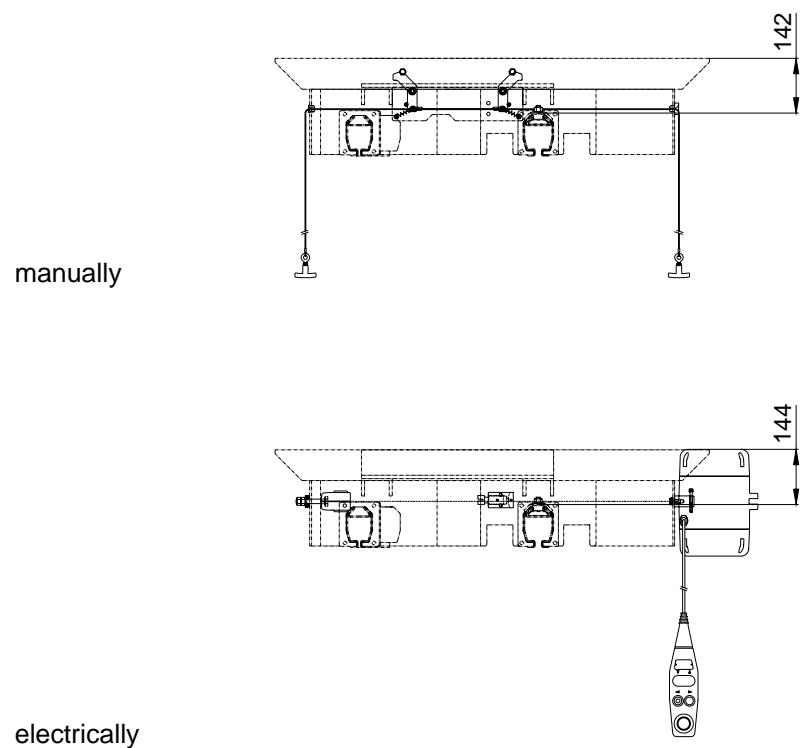

The four suspension points (1100 x 1050 mm) are mounted on to the ceiling which is duly levelled. Please do pay attention to the joining profiles distance of which must be 150 mm as a minimum.

	[kg]	Type		N°
GISKB I	128.000	Track switch right		9309.3501.3
GISKB I	128.000	Track switch left		9309.3502.3
GISKB II	142.000	Track switch right		9309.3503.3
GISKB II	142.000	Track switch left		9309.3504.3

**Example of order:**

Track switch right 9309.3501.3, operation electrically 9309.3551.2, 3 x 400 V, 50 Hz, control cable length 2 metres  
Conductor line R = 900, PE right 9309.3542.2

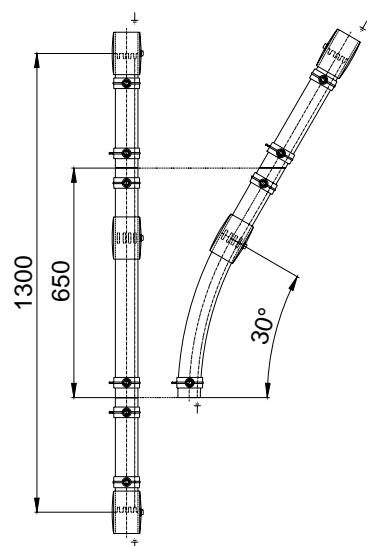

## Operation track switch

Execution ....: In case of the manual operation a traction rope (standard length 2 m) is used for the movement of the profiles. For the electric drive it is a two-buttons pendant switch (standard control cable length 2 m).

	[kg]	Type		N°
GISKB I + II	6.000	manually		9309.3550.2
GISKB I + II	27.000	electrically		9309.3551.2

## Conductor line VA34, 4-poles, track switch

**Execution ....:** The track switches can optionally be delivered with 4-poles conductor lines. Your order must specify the position of the conductor line as against the profile and the position of the earth wire.

**Note .....**: The conductor line is assembled at the works and duly adapted. The power supply of the connection parts is made at their respective profile ends.
