History

Mixtrum AB founded 2003 by Leif Boberg and Poa Åslund, is a high-technological engineering company located in Älvdalen in the middle of Sweden.

The word Mixtrum comes from the local dialect and means approximately to find clever solutions.

Manufacturing

We are specialized in manufacturing and assembly of fine mechanical parts from prototype to series.

In our manufacturing process we use from ordinary machine tool up to Multi-tasking machining centers and we machines most materials, like aluminium, steel, stainless, plastic and brass.

For quality control we use CNC-controlled measuring machines.

Through our well-developed co-operation with external suppliers we can take care of all forms of after-treatment, for example varnishing, surface finish and hardening.

Customers

We are subcontractors to industries in Sweden and the rest of Europe. We have customers within branches like vehicle, telecommunication, electronics, aviation, defence, instrument - and medicine technique together with traditional industry.

Quality

We are certified according to ISO 9000 and ISO 14000
