

MIXTRUM News 2018

Your first choice as a supplier of mechanical parts

News

Mixtrum continues its work with improvement of our production of advanced details. Our goal is to automate even small series and prototypes

Quality

The work of developing our Quality and Environmental Management System into a smart tool connected to our MPS system continues. We are certified according to ISO 9000 and ISO 14000

Staff

Our engaged and competent staff will continue to improve their processes towards a common goal of raising the quality of our planning.

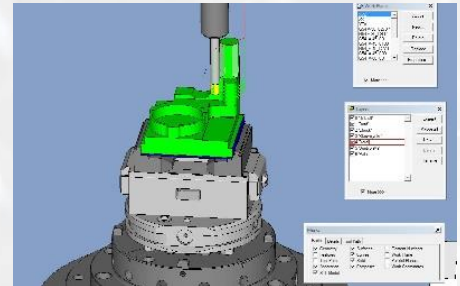

Technics

We always try to be at the front edge of technology and take advantage of the opportunities that developments make to improve our production and efficiency.

Processes

CAM.

We make programs for our machines directly on your 3D files. We handle from simple two-axis turning up to five-axis freeform machining for both lathe and milling machine.

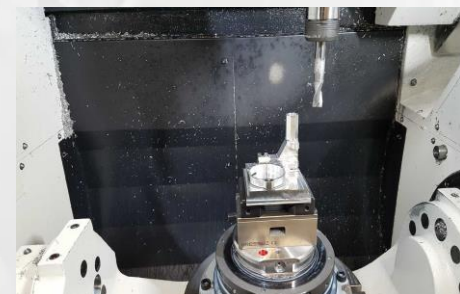

Automation.

Workpiece are loading in a Erowa magazin with a capacity of 50 pcs. We can now use 24 hours a day for production

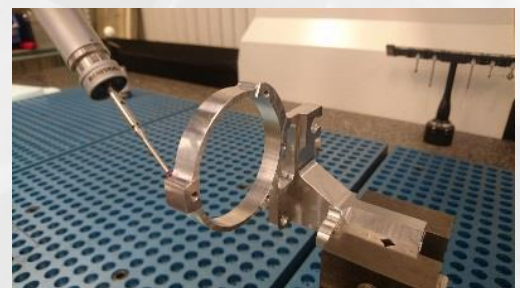

Production.

Erowa robot loads workpieces in the five axis machining center where we process multiple sides in a single setup to achieve the highest possible precision

Inspection.

Using your CAD file we construct a measuring program for inspection of manufactured components.

Preventive maintenance.

Mixtrum works with both external and internal maintenance to prevent any breakdowns or issues from occurring in the future. We use one machinetool brand from one supplier to reduce our maintenance costs and increase our operational reliability.
